

## Press Release

# The first sustainable design air purifier – Made in Germany

**OneLife X removes 99.99% of harmful particles and features reusable filter technology**

**Mönchengladbach, January 2022** - The revolutionary air purifier OneLife X will be presented exclusively for the European market at the international furnishing fair imm cologne 2022. The energy-saving device not only filters the smallest particles from indoor air but is itself made of sustainable materials and, thanks to its modern design, a true eye-catcher. OneLife X can be operated easily and conveniently via app or voice control. The air purifier also includes a reusable filter that can be easily rinsed or cleaned in the dishwasher.

The COVID-19 pandemic has brought increased attention to the need for clean air. But beyond that, indoor pollutants and particulate matter have been a serious health concern for years. The OneLife X now puts an end to indoor air pollution by filtering even the smallest pollutant particles from the air thanks to a patented plasma filter technology.

„Our vision at OneLife is simple: We want to enable people to breathe healthier air - especially indoors, where the air can be up to ten times more polluted than outdoors,” says CEO Christoph Burkhardt. „By using a plasma field and precision laser sensors the OneLife X captures and effectively eliminates 99.99% of all airborne particles. In doing so, our air purifier captures pollutant particles as small as 0.01 microns which is 10 times smaller than the coronavirus.”

In addition to being one of the most environmentally friendly air purifiers on the market, the OneLife X runs essentially silently and consumes only 6 watts of power during operation, less than an LED lamp. At the same time, thanks to its discreet modern design, it fits perfectly into any modern living environment. The OneLife X is made of rapidly regrowing bamboo and recycled plastic. The high-tech filter is easy to wash by hand or in the dishwasher and never needs to be replaced.

With the help of the OneLife app indoor and outdoor air pollution levels can be observed at all times in real

time. With a simple push of a button, via voice command to Amazon Alexa, Google Home assistant or Apple Siri the OneLife X can be easily controlled and fully automatically ensures a healthy indoor climate.

The innovative health tech company OneLife had the ambition to develop an air purifier for the next generation of consumers. It was to combine sustainable design with intelligent sensor technology and intuitive control, run completely autonomously and always ensure a healthy feel-good climate. „The OneLife X protects us from pollen, fine dust, bacteria and viruses, increases our concentration and productivity, reduces stress, alleviates asthma and allergies and, last but not least, ensures a more restful sleep,” explains CEO Christoph Burkhardt.

The revolutionary OneLife X air purifier is available for pre-order now. Learn more at [www.onelife.eco](http://www.onelife.eco).

### About OneLife

Innovative health tech company OneLife aims to revolutionize the health tech industry, starting with the air we breathe every day. OneLife's team of engineers, air quality experts and design pioneers - based in Mönchengladbach, Germany and in San Francisco, US - develops innovative products to make the world a healthier place. OneLife's visionary solutions are both sustainable and efficient. They make it possible to live a healthier life while protecting the planet. Learn more at [www.onelife.eco](http://www.onelife.eco).
